Cameron McKenzie

Senior Software Engineer Specializing in Agentic AI in the AWS Cloud

While I've worn many hats over the past 20 years, I always think of myself as a solutions architect at heart. I love technology, I love solving tough problems, and I love that rush that comes when a vision comes to fruition.

I'm also a communicator, team builder, teacher and GitHub Copilot advocate who has spent the past few years building life-changing, Generative and Agentic AI solutions in the AWS cloud. A "Golden Jacket" holder with all 12 AWS certifications, I'm here to help with all of your architecture, DevSecOps, Agentic AI and application delivery needs.

WORK EXPERIENCE

Generative & Agentic AI Technical Project Manager — Jan. 2026 – May 2026
Cambridge Health, Pheonix AZ

- Led end-to-end delivery of a fixed-bid, milestone-driven healthcare technology project under an MSA/SOW, while remaining hands-on with AWS-hosted application architecture, API design, integration planning, and technical troubleshooting.
- Partnered with architects and engineers to design and deliver Agentic AI and AI/ML workflow automation features using Amazon Bedrock, Amazon SageMaker, AWS AgentCore, vector-based knowledge retrieval (RAG).
- Spearheaded the modernization of the software development department by introducing Claude Desktop, Cursor, Replit and GitHub Copilot to the SDLC process.

GitHub & Microsoft Copilot Studio AI Enablement Lead — Aug. 2025 – Dec 2025
Informa TechTarget, Baltimore MD

- Led Microsoft Copilot Studio adoption and enablement across business teams, helping stakeholders identify viable agent use cases, clarify business value, and determine whether ideas were appropriate for governed AI automation.
- Created simple, business-friendly enablement materials explaining Copilot Studio capabilities, limitations, governance rules, and how it complements M365 Copilot rather than replacing it.
- Acted as the front door for Copilot Studio intake, guiding business users through approved use cases, governance expectations, training requirements, attestation steps, and DEV to UAT to PROD lifecycle processes.

Lead Agentic AI Arhictect for the AWS Platform — Feb. 2025 – Aug. 2025
Prism Technologies, Washington DC

- Led hands-on development of production-grade Agentic AI applications using Python, FastAPI, SQL, and AWS services, building scalable backend APIs for enterprise AI workflows and data-driven automation.
- Drove adoption of emerging Agentic AI frameworks and engineering practices, including AWS AgentCore, Spring AI, model evaluation workflows, secure tool execution, DevOps automation, and reusable AI services.
- Improved application scalability, observability, and reliability by optimizing backend services, containerized deployments, cloud infrastructure, logging, monitoring, error handling, and performance tuning across AWS-hosted AI systems.

Senior Agentic AI Solutions Architect — Jan 2024 – Feb 2025
Windsafe Energy, Richmond VA

- Built and integrated hands-on proof-of-concepts using LLMs, RAG, LangChain-style orchestration, traditional ML models, and fine-tuning approaches to solve energy-industry use cases involving asset data, maintenance workflows, safety documentation, and operational reporting.
- Architected AWS-based AI solutions using Amazon Bedrock, SageMaker, Amazon Connect, Lambda, ECS, EKS, API Gateway, S3, and vector-based RAG pipelines to support engineering knowledge retrieval, field operations automation, compliance research, and internal SDLC acceleration.
- Led the design, prototyping, and production deployment of Agentic AI and GenAI solutions for an energy-sector organization, improving engineering productivity, developer experience, and software delivery workflows across distributed application teams.

EDUCATION

Bachelor of Science - Chemistry
Western University

Information Systems Diploma
Durham College

UDEMY COURSES

I currently have over 35 AWS, GCP, Azure and Java courses on Udemy.

GitHub Copilot Masterclass for Java & Spring
GCP Generative AI Leader Masterclass
AWS Solutions Architect Professional Prep
Spring AI Masterclass for IntelliJ Developers
Official ISACA CISA Exam Prep Course
Azure Developer Certification Prep
Full-Stack GitHub Copilot in JS & Python
Docker & Kubernetes KCNA Exam Prep
ISC2 System Security Practice Exam (SSCP)
Azure Data Scientist Practice Tests
AWS DevOps Professional Exam Course
Pass the Jira Cloud Projects Certification
Official ISACA CISM Exam Prep Course
AWS Machine Learning (Sagemaker) Prep

Cameron McKenzie

Senior Software Engineer Specializing in Agentic AI in the AWS Cloud

My heavy involvement with the AI revolution has meant the past few years of work have dealt primarily with building Generative and Agentic AI solutions on AWS. However, prior to the push towards integrating LLMs with every aspect of our lives:

- I worked heavily in the DevOps space, with an emphasis on AWS technologies
- I helped spearhead product development efforts both as a Senior Scrum Master and a Product Owner
- I built highly scalable, loosely coupled microservices with Java, Python and Spring Boot

Work Structure
On-site, hybrid & remote

WORK EXPERIENCE

Senior Technical Lead for Java, Spring Boot & React Apps June 2021 – Dec. 2023
Canopy Health, Danbury CT

- Architected scalable RESTful APIs and backend services using Java, Spring Boot, MongoDB, Kafka, Oracle, and Teradata, applying microservices patterns such as API Gateway, service discovery, circuit breaker, retry, saga orchestration, event-driven messaging, and database-per-service design.
- Deployed and supported containerized Spring Boot services using Kubernetes, OpenShift, Docker, GitHub, and CI/CD pipelines, improving release reliability, production stability, resiliency, and performance across enterprise healthcare platforms.
- Two time winner of the Engineering Leadership Award.

AWS, Azure and GCP Cloud Migration Architect March 2018 – May 2021
Presidio Inc, Seattle WA

- Led AWS cloud migration architecture for production workloads using Elastic Beanstalk, Amazon EKS, EC2, RDS, VPC, IAM, S3, CloudWatch, Secrets Manager, Nginx ingress, ALB ingress, and Terraform, supporting secure, scalable, and highly available application deployments.
- Built and maintained CI/CD and GitOps pipelines using Azure DevOps Pipelines YAML, GitHub Actions, GitLab CI, Jenkins, ArgoCD, Flux, app-of-apps patterns, multi-environment promotions, pull requests, branching strategies, code reviews, and version control best practice
- Given the Operational Efficiency Impact Award (2019) & Excellence in Delivery Award (2020).

Senior DevOps Engineer | AWS Cloud Dec. 2013 – Feb. 2018
IBM, Austin TX

- Built and maintained secure, highly available AWS cloud infrastructure using EC2, S3, RDS, Lambda, VPC, IAM, security groups, ACLs, CloudWatch, Terraform, Ansible, and CloudFormation to support scalable production workloads and enterprise cloud operations.
- Automated infrastructure provisioning, deployment workflows, and operational runbooks using Infrastructure as Code, Terraform modules, Ansible playbooks, CloudFormation templates, Python scripting, Bash scripting, YAML, Git, and CI/CD pipeline automation.
- Partnered with application, security, networking, and operations teams to strengthen DevOps best practices, AWS security controls, VPC networking, release automation, system performance, Kafka/OpenStack integrations, and high-availability architecture.

Sr. Full Stack Developer in Java, Spring, Angular & React Dec. 2006 – Jan. 2012
Perficient Inc, Las Vegas, NV

- Designed and developed modern, responsive React.js single-page applications using JavaScript, TypeScript, React Hooks, Context API, Redux, HTML5, CSS3, reusable UI components, REST/JSON integration, lazy loading, code splitting, and frontend performance optimization.
- Built scalable Java and Spring Boot microservices using Java 8/11/17, Spring MVC, Spring Data JPA, Hibernate, RESTful API design, microservices architecture, business logic implementation, and enterprise application design patterns.
- Supported Agile engineering delivery through Maven, Jenkins, GitHub, GitLab, Azure DevOps, CI/CD pipelines, Docker, Kubernetes, JUnit, Mockito, Jest, Enzyme, code reviews, design reviews, sprint ceremonies, and production release coordination.

BOOKS, SITES & PUBLICATIONS

What is WebSphere?
My first book, published in 2006.

INDUSTRY CERTIFICATIONS

GitHub Certified Copilot Developer
AWS Certified Agentic AI Architect
AWS Certified Solutions Architect
AWS Certified AI Practitioner
AWS Certified DevOps Engineer
AWS Certified Machine Learning Engineer
AWS Certified Data Engineer Associate
AWS Certified Developer Associate
AWS Certified CloudOps Engineer
AWS Certification Cloud Practitioner
AWS Certified Security – Specialty
AWS Certified Advanced Networking
UiPath Certified Professional Developer
Professional Scrum Master (PSMII)
Professional Scrum Product Owner (PSPO)
Oracle Certified Professional (OCP)
Sun Certified Java Programmer (SCJP)
IBM Certified WebSphere Administrator
Microsoft Certified Systems Engineer (MCSE)
