

Cameron McKenzie

Senior AI Technical Project Manager and Enterprise Delivery Leader

I bring 20+ years of enterprise technology experience across project delivery, product ownership, Java development and cloud transformation. My recent focus is leading Generative and Agentic AI adoption with GitHub Copilot, Copilot Studio and AWS.

I align technology with business goals, translate complex decisions for stakeholders and guide teams from concept to delivery. My AWS certifications, Scrum Master and Product Owner credentials support practical leadership in secure AI adoption and enterprise delivery.

+ WORK EXPERIENCE

Senior AI Technical Project Manager

Jan. 2026 – May 2026

Universal Health, Boston MA

- Led end-to-end delivery of a fixed-bid healthcare technology project under an MSA/SOW, aligning scope, delivery milestones and integration plans with hands-on AWS architecture, API design and resolution of technical blockers.
- Coordinated architects and engineers to deliver Generative AI, Agentic AI and ML workflow automation using Amazon Bedrock, SageMaker, AWS AgentCore and retrieval-augmented generation (RAG).
- Led developer productivity and SDLC modernization through adoption of Claude Desktop, Cursor, Replit and GitHub Copilot, connecting AI capabilities with software delivery needs.

AI Adoption Program Lead and Product Owner

Aug. 2025 – Dec 2025

Informa TechTarget, Newton MA

- Led Microsoft Copilot Studio adoption across business teams, shaping agent use cases, clarifying business value and determining suitability for governed AI automation.
- Created stakeholder presentations and enablement materials explaining Copilot Studio capabilities, limitations, approved usage and governance expectations alongside M365 Copilot.
- Managed Copilot Studio intake and adoption readiness, guiding users through governance, training, attestations and DEV-to-UAT-to-PROD delivery processes.

AI Platform Project Lead and Product Owner

Feb. 2025 – Aug. 2025

Prism Technologies, Cambridge MA

- Led delivery of production Agentic AI applications using Python, FastAPI, SQL and AWS, coordinating backend APIs and reusable services for enterprise workflows and data-driven automation.
- Drove adoption of Agentic AI frameworks and AI SDLC practices, including Spring AI, model evaluation, secure tool execution and DevOps automation, aligning implementation with platform needs.
- Coordinated improvements to scalability, observability and reliability across AWS AI systems, addressing cloud infrastructure, container deployments, monitoring, error handling and performance.

AI Technical Project Manager and Solution Lead

Jan 2024 – Feb 2025

Windsafe Energy, Framingham MA

- Led AI proof-of-concept workstreams using LLMs, RAG, orchestration, ML and fine-tuning, translating energy-sector needs in asset data, maintenance, safety documentation and reporting into practical solutions.
- Aligned AWS AI architecture and integrations with engineering and operational needs using Bedrock, SageMaker, Lambda, ECS, EKS, API Gateway, S3 and vector retrieval for knowledge access and workflow automation.
- Led GenAI and Agentic AI initiatives from design and prototyping through production deployment, coordinating distributed application teams to improve engineering productivity and software delivery.

• UDEMY COURSES

I currently have over 35 AWS, GCP, Azure and Java courses on Udemey.

GitHub Copilot Masterclass for Java & Spring
GCP Generative AI Leader Masterclass
AWS Solutions Architect Professional Prep
Spring AI Masterclass for IntelliJ Developers
Official ISACA CISA Exam Prep Course
Azure Developer Certification Prep
Full-Stack GitHub Copilot in JS & Python
Docker & Kubernetes KCNA Exam Prep
ISC2 System Security Practice Exam (SSCP)
Azure Data Scientist Practice Tests
AWS DevOps Professional Exam Course
Pass the Jira Cloud Projects Certification
Official ISACA CISM Exam Prep Course
AWS Machine Learning (Sagemaker) Prep

Cameron McKenzie

Technical Project Leadership in AI Java and Enterprise Cloud

My recent work centers on Generative and Agentic AI delivery, developer productivity and governed platform adoption. I also bring a foundation in Agile product leadership:

- I pride myself on bringing projects in on-time and on-budget
- My success is team success. Every great success I've ever had has been the result of getting the most out of a team of great developers
- I take Agile principles seriously, with a strong track record in applied Scrum, Lean principles and empirical analysis

+ WORK EXPERIENCE

Technical Delivery Lead and Agile Product Owner

June 2021 – Dec. 2023

Canopy Health, Danbury CT

- Led technical delivery of Java and Spring Boot APIs and backend services using MongoDB, Kafka, Oracle and Teradata, guiding microservices design, integration dependencies and event-driven workflows.
- Coordinated deployment and support of Spring Boot services using Kubernetes, OpenShift, Docker and CI/CD pipelines, improving release reliability, production stability and performance.
- Two time winner of the Engineering Leadership Award.

Cloud Migration Technical Project Manager

March 2018 – May 2021

Presidio Inc, Worcester MA

- Led AWS cloud migration delivery and architecture for production workloads, aligning application deployment with infrastructure, security and availability requirements using EKS, EC2, RDS, VPC, IAM and Terraform.
- Supported delivery across environments through CI/CD and GitOps pipelines, release promotions, branching strategies and code reviews using Azure DevOps, GitHub Actions, Jenkins, ArgoCD and Flux.
- Given the Operational Efficiency Impact Award (2019) & Excellence in Delivery Award (2020).

Cloud Project Lead and DevOps Coordinator

Dec. 2013 – Feb. 2018

IBM, Austin TX

- Delivered secure AWS infrastructure for enterprise workloads using EC2, S3, RDS, Lambda, VPC, IAM and CloudWatch, connecting application delivery with infrastructure and operational requirements.
- Drove infrastructure and release automation using Terraform, Ansible, CloudFormation, Python and Bash, standardizing deployment workflows and operational runbooks for repeatable delivery.
- Coordinated application, security, networking and operations teams on cloud security controls, release automation, performance, Kafka/OpenStack integrations and high-availability architecture.

Java Technical Project Lead

Dec. 2006 – Jan. 2012

Perficient Inc, Springfield MA

- Delivered React and TypeScript applications, translating business needs into reusable components, REST/JSON integrations and responsive user experiences while contributing hands-on full-stack development.
- Built Java and Spring Boot microservices using Spring MVC, Spring Data JPA, Hibernate and REST APIs, providing the engineering foundation to guide design decisions and enterprise software delivery.
- Supported Agile project execution through sprint ceremonies, design and code reviews, CI/CD pipelines, automated testing and production release coordination using Maven, Jenkins, GitHub, Docker and Kubernetes.
