Your learning journey

Confidential

Sprint Objectives

- Build reactive Angular applications using standalone components and signals
- Implement authenticated user journeys including JWT interceptors and route guards
- Write meaningful unit and end-to-end tests covering core user journeys
- Generate and consume typed API clients from OpenAPI specifications, connecting the Angular frontend to live backend services

Confidential

Mission for the Week

Sprint 9: User Interface

- Build the login flow, dashboard, order ticket and blotter
- Generate typed clients from your OpenAPI specs so the UI talks to live services
- Cover the core journeys with unit tests and Playwright end to end
- *Security focus: JWT interceptors, route guards, output encoding against XSS*
