Cameron McKenzie

Professional Experience

Feb 2020 – Present

Xennial Consulting

Miami, FL

Cloud Operations Architect and Scrum Master

- Designed, planned, and implemented multiple AWS cloud initiatives with a focus on rapid provisioning and data center consolidation
- Redesigned the AWS infrastructure to reduce costs and improve security and compliance.
- Implemented policies and controls that helped to reduce overall AWS and GCP spending by 15 percent.
- Managed and mentored a 15-member team of site reliability engineers.
- Provided guidance and mentoring to junior engineers on AWS, automation, and DevOps best practices.

March 2018 – Feb 2020

Ortho Clinical Diagnostics

Rochester, NY

WebSphere Portal Architect and WCM Lead

- Worked with project managers and technical leads in the migration of existing SOA based systems into a microservices based architecture
- Worked to integrate various DevOps tools such as Chef, Docker, Kubernetes, Amazon ECS, Git and Jenkins into the software development lifecycle

March 2015– March 2018

Laurentian Bank of Canada

Montreal, QC

DevOps Lead – Corporate Accounts

- Spearheaded the integration of DevOps practices by automating builds with Jenkins, moving source code management off Subversion and into Git, using JFrog Artifactory and migrating on premise apps into cloud based, AWS services
- Managed and mentored an 8-member team of AWS Sys Admins across multiple time zones.
- Responsible for bringing DevOps practices, philosophies, tooling, and culture change to all onshore and offshore software engineering teams

February 2013 – March 2015

Scotiabank

Toronto, ON

Senior Solutions Architect and WebSphere Portal Technical Lead

- Reporting to the Director of IT for International Applications, I collaborated with development leads, database engineers, projects managers, QA staff and operations teams to ensure the system design and incremental software builds conformed with the approved design documents
- Led the effort to create and deploy a unified build and CI/CD microservices deployment pipeline
- Designed RESTful web services to facilitate the integration of Java EE components and non-Java clients from other projects with internal APIs that provided access to AWS Lambda services

June 2011 – Feb. 2013

Cummins International

Columbus, IN

Software Development Lead and WebSphere Portal Subject Matter Expert (SME)

- Provided technical direction, risk management, constraint assessment and business requirement traceability as core WebSphere and Java EE functionality was ported to a new system

Cameron McKenzie

Professional Experience

Aug 2009 – June 2012 AxiomGT Consulting Miami, FL
WebSphere Portal Administrator and Engineer

- Specialized in migrating version 6.x and 6.1.x versions of WebSphere Portal to versions 7 and 8, including the integration of Lotus/IBM Connections into WebSphere Portal
- Performed WebSphere Portal 6.x and 7 migrations, along with WCM, to Liferay Portal and Alfresco content management systems
- Extensive work leading teams developing JSR-286 portal applications, including the migration of older JSR-168 applications to the newer standard
- Led a variety of WebSphere Portal consolidation projects, bringing various decentralized systems together into a single portal installation
- Performed requirements gathering, developed statements of work (SOWs) and developed implementation paths and plans
- Provided architectural visioning for a number of fortune 500 companies looking to implement WebSphere Portal based enterprise solutions

May 2006 – July 2009 Master Data Management (MDM) Las Vegas, Nevada
JBoss Administrator and Developer – Entity Analytics and AML Technologies

- Architected, developed and facilitated the implementation of anti-fraud and anti-money laundering solutions for various fortune 500 companies and government agencies
- Worked to develop and support RESTful APIs for software product, and assist customers in building enterprise Java applications (Java EE), hosted on JBoss, that leveraged these interfaces
- Processed incoming data through a variety of ETL solutions, with primary focus on Informatica

Aug. 2000 – May 2006 Perficient Inc. Austin, TX
Lead Developer/Senior Developer

- Implemented WebSphere and WebLogic solutions that embraced the philosophies of high availability, simple maintainability, and infinite scalability
- Mentored both developers and administrators on how to effectively develop and deploy Java 2 Enterprise Edition (J2EE) applications
- Provided direction and support, facilitating the development and deployment of J2EE applications that took advantage of a variety of proprietary and open source technologies
- Used a variety of scripting languages to automate test, QA, staging and production environments

Oct. 1997 – Aug. 2000 ITI, Information Technology Institute Denver, CO
Technical Facilitation Specialist for the Enterprise

- The lead technical reference for ITI's Java and DB2 modules, the Technical Facilitation Specialist's role is to provide guidance and subsequently mentor ITI facilitators as they develop object design, Java programming and database administration skills

Object Oriented Programming with VisualAge module,
employing a variety of collaborative and example-based facilitation strategies

Cameron McKenzie

Education

1995-1997 Durham College Oshawa, ON
Business Administration Diploma
Department of Technology: Internet & Multimedia Design, Post Secondary Certificate

Professional Designations

1991-1995 University of Western Ontario London, ON
Bachelor of Science
Scrum Certified Professional Scrum Master
Scrum Certified Professional Product Owner
IBM Certified Associate Developer – Rational Application Developer for WebSphere 6
IBM Certified Application Developer – Rational Application Developer for WebSphere 6
IBM Certified Solution Developer – IBM WebSphere Portal
IBM Certified System Administrator – IBM WebSphere Portal
IBM Certified System Administrator – IBM WebSphere Application Server

Oracle Certified Associate - Java 7 Programmer (OCAJP)
Sun Certified Java Associate (SCJA)
Sun Certified Enterprise Architect, Java EE 5 (SCEA)

Microsoft Certified Systems Engineer - Windows NT (MCSE)
Microsoft Certified Professional + Internet - Windows NT (MCP+I)
Microsoft Certified Professional – Windows NT (MCP)

Books and Publications

Scrum Master Certification Guide
Hibernate Made Easy: Simplified Java Persistence with Hibernate and JPA Annotations
■ explains Hibernate and JPA in simple and easy to understand terms.
JavaServer Faces Made Easy – Simplified Web Development with JSF
■ explains Hibernate and JPA in simple and easy to understand terms.
What is WebSphere? Demystifying IBM's Middle Tier Technology
■ this best-selling book on WebSphere explores the technology that drives IBM's middle tier, explaining the technology in a humorous and entertaining manner. Available on amazon.com.
JSR-168 Portlet Development: Learning How to Develop Effective Portlet Applications
Sun Certified Java Programmer Certification Study Guide
Sun Certified Java Programmer: The Exam Questions

Cameron McKenzie

The following is a small sampling of the many technical engagements in which I have participated over the past several years.

Bunge International; White Plains, NY

- Worked with corporate headquarters to develop a technical vision for their corporate Internet
- Architected a WebSphere portal vision, based heavily upon Web Services for Remote Portlets (WSRP), to tie together the various business units of this 60 billion dollar a year company

The GAP: Gap, Old Navy, Banana Republic and Gap Kids; San Francisco, CA

- Provided consulting services to help migrate an existing JBoss site into a WebSphere environment
- Assisted with architecture decisions surrounding the development of virtual portals to support both internal and externally facing portal sites

AAA Insurance; St.Louis, MO

- Mentored a group of ten developers with respect to proper Java EE development using Rational Software
- Provided design guidelines and best practices for developing applications using the JSF and Spring framework
- Helped develop internationalized applications using Spring MVC and Spring Web Flow

Sears Canada; Toronto, ON

- Mentored a group of WebSphere developers in best practices when using WebSphere Portal Server
- Communicated and demonstrated the various technologies available when architecting a WebSphere solution

Unigroup Inc; St. Louis, MO

- Provided guidance to a group of five developers working on Java EE applications

Boeing Aircraft; St. Louis, MO

- Worked with a group of five developers, assisting them in the development of a parts management application for the airline industry.
- Helped develop scripts to automate the deployment of applications from source code management tools

State Farm Insurance; Bloomington, IL

- Worked with a group of five WebSphere administrators and senior developers
- Helped configure the WebSphere Application Server for Java EE application deployment
- Helped troubleshoot session problems between Microsoft's IIS and the WebSphere Application Server

3M; St. Paul, MN

- Mentored and facilitated the development of an employee portal
- Helped develop portlets that accessed collaborative components within a single sign-on environment

General Electric; St. Louis, MO

- Developed and deployed Spring MVC based applications to WebLogic
- Provided a feature analysis comparing JSF and SpringMVC, two popular open source frameworks
- Ported inventory management applications, originally created using HP Sapphire, to WebLogic

Legal and General Insurance; London, England. Cardiff, Wales

- Mentored developers in the creation of Java EE solutions, which supported an integrated architecture that used a variety of different security and session management mechanisms

Cameron McKenzie

While the majority of my time is spent developing and architecting J2EE solutions, I relish the opportunity to share my knowledge and passion for technology with others. The following is a partial listing of the courses I have been certified to deliver for IBM Learning Services (ILS).

Developing Applications with the Java Persistence API

- This course teaches students how to build Java applications that use the Java Persistence API (JPA), EJB 3.0 components. This course also looks at various NoSQL databases and the benefits and drawbacks to using them

Continuous Integration with Jenkins, Maven and Artifactory

- This course teaches students about the Apache Maven build process, the principles of continuous integration, and the knowledge of how to implement continuous integration with automated test execution using Jenkins, Maven, and the Artifactory repository manager

IBM WebSphere Application Server Problem Determination

- Enterprise application deployment, workload management, implementing security and monitoring performance are just some of the topics delivered in this challenging five-day course
- While exercises and labs are all performed on Windows machines, attention is paid to commands and differences between Windows and AIX implementations of the Application Server

Modern Java EE Development for the WebSphere Application Server

- This course teaches how to develop and test Enterprise JavaBeans (EJBs), servlets and other components with the latest Java EE specifications

Advanced Version Control with Git and GitHub

- Moving far beyond the simple basics of using Git as version control tool, this course places emphasis on the multiple workflow possibilities, the challenges associated with distributed source code management and the paradigm shift required to use distributed version control effectively.

Getting Started with Containers, Orchestration Tools and Microservices

- This course offers an introduction to microservices and describes the essential concepts of service based architectures and cloud native computing. This course explored Docker, Kubernetes and the new Java MicroProfile

An Introduction to Responsive Web Development with AngularJS and Bootstrap

- This course introduces students to the AngularJS framework, along with a look at how to create responsive designs using CSS, media queries and the Bootstrap framework.

An Introduction to Responsive Web Development with AngularJS and Bootstrap

- This course teaches attendees how to use DevOps for continuous integration and delivery of application development and maintenance. The information delivered enables key understanding in the configuration, automation, monitoring, measuring and governance required to build a stable, scalable, and reliable build and configuration management process.
